First real waterslide crossing

Xslide makes sliding through a crossing possible for the first time

- Real crossing of two slide paths
- Safe operation due to spacers
- Even possible with multiple crossings
- 2/3 person boats
- Spectacular marketing effect

At the largest trade fair in the leisure industry, IAAPA in Orlando, Wiegand.Waterrides presents a crossing in a water slide for the first time in its 40-year history as a waterslide manufacturer.

For the first time in the history of the water slide

Wiegand.Waterrides is known for highly innovative novelties in the water slide segment. Interactive games, individual stainless-steel creations, combinations, the revolutionary SlideWheel and most recently the fast-paced SlideCoaster.

Now the dream of a new slide combination is finally possible - the crossing. Inspired by children's marble runs, Wiegand.Waterrides has now developed this element which is extremely attractive, especially visually, and which will attract everyone's attention, especially from above, e.g. down from the stair tower. The slide guests travel through the crossing at great speed, only to cross the same passage again after a turn.

"completely new experience - visually and during the ride".

Safe operation is guaranteed here. Guests take their seats in 2 or even 3-person boats and an entry lock and traffic lights regulate the operation. More than one crossing desired? This is also possible with a clever programming of a conveyor belt, which transports the passengers at the start into the water slide in a precisely timed manner. The second crossing is controlled by an uphill track with water pressure and several sensors. Similar to modern roller coasters, the track is thus divided into sections (blocks) in which only one boat can stay at a time.

In addition, exciting theming is possible with elaborate GRP patterns, themed elements, Wie-Spray water surprises and the innovative Wie-Glow black light technique!

Ready to cross? Wiegand Xslide!
